Safety instructions

This manual does not constitute a complete catalog of all safety measures necessary for the operation of the respective medical equipment, since special operating conditions may require further measures. However, it does contain instructions which must be observed in order to ensure the personal safety of operating staff and patients as well as to avoid damage to property. These instructions are highlighted as follows:

**WARNING**

This is the highest level of risk. Personal injury or damage to property may occur if the operator does not observe the instructions provided here.

**CAUTION**

This means that a situation exists which may require a decision or action on the part of the user for optimum equipment performance or to avoid a minor hazard.

**Note**

Notes are informative. Additional useful information and hints are provided for the operator here.

**Intended use**

The medical equipment is intended for fluoroscopies in the field of surgery, e.g. in traumatology, orthopedics, neurology, urology, cardiology. Third-party devices and components used in combination with the system must comply with the safety requirements according to IEC 60601-1 and/or IEC 60601-1-1 or furnish proof of an equivalent degree of safety.

Proper and safe operation of the system requires adequate transportation, storage, assembly and installation as well as appropriate use and maintenance.

The limiting values indicated in this user manual must not be exceeded; this applies also when putting the system into service.

**Operation (U.S.A.)**

In the U.S.A., Federal law restricts use of this device to trained personnel on the order of a physician.

**Authorized personnel**

Only authorized personnel are allowed to assemble and/or repair the medical equipment described in this manual. Authorized personnel are persons who have attended an appropriate training course provided by the manufacturer.

**Exclusion of liability**

The manufacturer accepts responsibility for the safety, reliability and performance of the system only if

- any installation, modification or repair work is carried out exclusively by persons authorized by the manufacturer;
- the electrical installation of the room where the system is operated complies with the requirements of VDE 0107 or the corresponding national regulations of the respective country;
- the system is used in accordance with the user manual.

The warranty becomes invalid in case that any repair, modification or installation work is carried out by unauthorized personnel. No consequential damages will be accepted either.

The equipment conforms to Class IIb according to the Council Directive 93/42/EEC.

This user manual has been written and reviewed originally in German and translated.

2.1 18.1” flat-screen monitor

2.1.1 Description

The 18.1” flat-screen monitor is a monochrome high resolution LC Display. It works as a separate module and is not integrated in the CAN bus. All settings and adjustments are made by an integrated setup menu.

2.1.5  On screen display

2.1.5.1  Locking and unlocking the on screen display

The monitor is set up and adjusted by a on screen display. The functions are controlled by an integrated keypad.

![Monitor keypad](image)

Fig. 2-4  Monitor keypad

The on screen display is activated by pressing the "Menu" key. In the section "Setup" it is possible to lock the menu.

![Menu "Setup"](image)

Fig. 2-5  Menu "Setup"

If this function is activated, the menu will disappear. Instead of the menu you will get a message "MENU LOCKED" for a short time. Now the access to the on screen display is denied. You will get this message any time you press a key on the keypad.

![Menu locked](image)

Fig. 2-6  Menu locked

In order to unlock the menu, you have to press the keys "MENU" and "SCROLL" simultaneously until you get a message "MENU UNLOCKED"
You can use the key combination "MENU" and "SCROLL" also to lock the on screen display directly. This function will toggle between "MENU LOCKED" and "MENU UNLOCKED".

2.1.5.2 Restoring the factory settings

In the section "Defaults" of the on screen display you can restore the factory settings. The factory settings are not optimized for the video output of the image memory (Bios Version 58B0109 C 01). The top line refers to the input connector and the timing. BNC 733 x 568 / 50 Hz for Compact Flat.

If the factory default was performed, the image will be outshining and not centered. Refer to the table of settings for correct values.

Option Litho Interface

3.1 Overview Ziehm Compact Lithotripter adaption

Fig. 3-1  Overview Ziehm Compact Lithotripter adaption
3.2 Lithotripter adaption requirements

- Mechanical interface for a Lithotripter source: The focal spot of the lithotripter source must be in the intersection of the central beam and the angulation axis of the C-arm.
- Reinforced bearing blocks for the orbital rotation of the C-arm.
- Horizontal slide blocked at position "0 cm" indicated on attached scale.
- Vertical lift restricted to 230 mm.
- Wig-Wag (10-0-10 degrees) blocked at 0 position.
